

Migrate to PaaS

Develop custom solutions with unlimited infrastructure, high availability and scale.

Spend less time managing your applications' processes and workloads, spend more time innovating and improving them.

What is it?

PaaS – Platform-as-a-Service. It means we'll provide you with the hardware and software tools you need for your application development, hosted on our infrastructure. What's not to like?

Main benefits

- Unlimited infrastructure, which allows you to automatically scale as need dictates
- Prebuilt computing infrastructure and development tools, including your core stack, and the ability to automatically deploy to a fully provisioned cluster
- Enhanced agility; build, deploy, and iterate quickly
- Utility billing model means you only pay for what you use
- High availability, with premium support and SLAs
- PaaS has all the power of the cloud in a platform that allows you to develop your solutions more quickly, and customise apps to meet your business needs.

Why Cloud Know How?

We understand that migrating your existing solution and the re-architecture involved in that migration, can seem like a daunting task.

To take the stress out of migrating to PaaS from a legacy system or IaaS platform, our experienced technical team can:

- Work with you to re-architect your application for the move
- Design, build and deploy new 'born in the cloud' WebApps
- 'Lift and Shift' legacy apps to the cloud
- Implement DevOps practises using the latest Visual Studio Team Services (VSTS) and Azure PaaS technologies
- We are here to ensure that you can take full advantage of the time and cost savings a PaaS platform offers, without having to spend time worrying about the logistics of migration.
